Planmeca ProOne®
Planmeca ProOne® is our full-featured panoramic X-ray unit, designed with simplicity in mind. Featuring cutting-edge innovations, Planmeca ProOne combines extensive diagnostic capabilities and superior image quality into a compact, easy-to-use package. Planmeca ProOne truly inherits Planmeca’s expert knowledge and long traditions in dental imaging.
For every dentist
The fully digital Planmeca ProOne® X-ray unit provides absolute ease of use with cutting edge technology. The wide selection of exposure programs and easy-to-use graphical user interface ensures fast and effortless radiographic examinations in every situation. The compact Planmeca ProOne brings the benefits of digital imaging within the reach of every dentist the world over.

Patient positioning made easy
One of the most common reasons for failed radiographs is incorrect patient positioning. The side entry and open positioning system make patient positioning quick, precise, and easy. You can freely observe your patient from the front and sides to minimise errors related to patient positioning.

Precise positioning with triple laser beam system
Patient positioning is assisted by a triple laser beam system, which accurately indicates the correct anatomical positioning points. Patient positioning has never been easier and more accurate. The midsagittal laser and the horizontal Frankfort laser ensure correct sideways alignment and forward tilt of the head while the focal layer beam helps to position the patient accurately inside the focal layer for a sharp and clear image.

User interface provides guidance
The full-colour graphical user interface provides clear texts and symbols to guide you through your procedure. Settings are logically grouped and easy to understand, speeding up imaging and allowing you to focus on positioning your patient correctly and communicating with them. The full colour TFT display is easy to wipe clean for impeccable infection control.
Versatile imaging programs

Planmeca ProOne® offers you a wide variety of imaging programs for different radiographic needs. You can also select the correct exposure formats to minimise the radiation dose for all types of patients and diagnostic purposes.

Optimised imaging programs for precise diagnosis

Planmeca ProOne® provides a variety of all-round imaging programs for different radiographic needs. Besides the Standard panoramic program, Planmeca ProOne offers improved interproximal, Orthogonal and Bitewing programs for more specific diagnostic needs.

- The interproximal panoramic program produces a panoramic image where interproximal contacts are open. Ideal for caries detection.
- The Orthogonal panoramic program produces an image where the alveolar crest is clearly visible. It enhances the diagnostics of periodontal conditions and traumas.
- An image taken with the Bitewing panoramic program, which uses improved interproximal projection geometry, is similar to an intraoral bitewing image pair. The advantage is that the image is obtained with one simple extraoral exposure and a very low radiation dose.
- The Horizontal and vertical segmenting program limits the exposed area strictly to the diagnostic region of interest. Patient dosage is reduced by up to 95%* compared to a full panoramic exposure.

- The automatic Double TMJ program produces a lateral or posteroanterior view of open or closed temporomandibular joints in a single radiograph allowing easy diagnosis of the TMJ condition.
- The Sinus program has a specially designed image layer providing a radiograph with a clear view of the maxillary sinuses.
- The Cross-section program is intended for simple cross-sectional imaging of TMJs and jaws in the molar and premolar region. These images convey valuable information on cross-sectional dimensions and the structure of the jaw.

Imaging programs

Functional technology

Scientifically accurate adjustments
As the size and shape of the jaw varies from one individual to another depending on size, gender, race, and age, one fixed panoramic focal layer form cannot be optimal for every patient. On the graphical user interface, the operator may adjust the shape of the focal layer according to the shape and size of the jaw characteristic to the patient.

Digital workflow
Direct digital radiography offers many advantages both for the patient and for the imaging workflow:

• Time is saved. The image appears on the computer screen within seconds after the exposure, and is immediately available for diagnosis.
• With film processing and darkrooms left behind, the most common reasons for failed radiographs are eliminated.
• Digital images can be enhanced in the imaging software for more accurate diagnosis.
• Digital archives and networks enable efficient image communications.

Autofocus – for perfect panoramics every time
The unique Autofocus feature automatically positions the focal layer using a low-dose scout image of the patient’s central incisors. Landmarks in the patient’s anatomy are used to calculate placement, enabling practically error-free patient positioning and dramatically reducing the need for retakes. The result is the perfect panoramic image, every time.

Exposure control
The unique digital Dynamic Exposure Control (DEC) automatically adjusts the exposure values for each individual patient based on their anatomic structure and bone density. DEC clearly improves the image quality with more consistent brightness and contrast.

Diagnostic clarity
To produce accurate and undistorted radiographs with clearly superior clinical quality, the focal layer was designed to follow the scientifically defined shape of the human dental arch and jaw. The imaging geometry eliminates shadows and ghost images caused by objects outside the image layer, significantly increasing the diagnostic value of the radiograph.

Self-diagnostic system
for assisted use and servicing
A self-diagnostic control system continuously monitors the unit. The system displays help messages that assist the operator and enable correct use of the unit. In case of abnormal operation, the system displays messages which are stored in a log to help both the operator and the technical service.

Planmeca Romexis® imaging software

Planmeca Romexis® is a comprehensive software for acquiring, viewing, and processing 2D and 3D images. Full support for both Windows and Mac OS operating systems provides additional freedom in operating your clinic.

Planmeca iRomexis™

Planmeca iRomexis™ is a mobile companion application for Planmeca Romexis imaging software designed for iPhone and iPad devices. The application can be downloaded from the App Store free of charge.

**Supported 2D modalities**
- Intraoral
- Panoramic
- Cephalometric
- 2D linear tomography
- Photos
- Stack images (CBCT slices and panoramic slices)

**Supported 3D modalities**
- 3D CBCT
- 3D photo
- 3D surface scan

**Supported photo sources**
- Intraoral camera
- Digital camera or scanner (import or TWAIN capture)

**Operating systems**
- Win XP / Win Vista Pro / Win 7 / Win 8
- Win 2003 Server / Win 2008 Server
- Mac OS X*

For detailed information please see system requirements of Planmeca Romexis www.planmeca.com

*Cephalometric Analysis module and 3D Ortho Studio module are not supported on Mac OS

**Image formats**
- JPEG or TIFF (2D image)
- DICOM (2D and 3D image)
- STL (3D image)
- TIFF, JPEG, PNG, BMP (import/export)

**Image size**
- 2D X-ray image: 1–9 MB
- 3D X-ray image: typically 50 MB–1 GB

**Installation options**
- Client–Server
- Java Web Start deployment
- DICOM 3.0 support
- DICOM Import/Export
- DICOM DRR Media Storage
- DICOM Print SCU
- DICOM Storage SCU
- DICOM Worklist SCU
- DICOM Query/Retrieve
- DICOM Storage Commitment
- DICOM MPPS

**Interfaces**
- TWAIN Client
- PMBridge (patient information and images)
- VDDS (patient information and images)
- InfoCarrier (patient information)
- Datagate (patient and user information)

**3rd party software integrations**
- Dolphin Imaging
- Nobel Clinician
- Materialise Dental Simplant
- Straumann coDiagnostiX
- Cybermed N-Liten

**Dimensions**

<table>

</tbody>
</table>

**Minimum operational space requirements**

**Technical data**
- Generator: constant potential, resonance mode high frequency 60–80 kHz
- X-ray tube: D-058SBR
- Focal spot size: 0.5 x 0.5 mm (IEC 336)
- SID: 480 mm (19 in.)
- Total filtration: min. 2.5 mm Al eq.
- Anode voltage: 60–70 kVp
- Anode current: 2–7 mA DC
- Exposure time: 2–10 s
- Magnification: 1.22–1.29
- Line voltage: 100–123 V~ 50/60 Hz, 180–240 V~ 50 Hz
- Regulation: ±10 % (automatic)
- Line current: 8–16 A
- Power uptake: max. 850 W
- Chin rest level: 95–178 cm (37.4–70 in.)
- Colour: white (RAL 9016)
- Weight: 67 kg (148 lbs)

**Technical specifications**

**Imaging programs**
- **Basic panoramic programs**
  - Standard panoramic
  - Lateral TMJ
  - PA TMJ
  - PA Sinus
- **Horizontal and vertical segmenting for panoramic program**
- **Advanced panoramic programs**
  - Interproximal panoramic
  - Orthogonal (peri) panoramic
  - Lateral–PA TMJ
  - Lateral multiangle TMJ
  - Lateral non rotational sinus
- **Cross-sections**
- **Child (Pediatric) mode for each program to reduce the dose**

Find us on Facebook www.facebook.com/PlanmecaOy
Planmeca Oy designs and manufactures a full line of high technology dental equipment, including dental care units, panoramic and intraoral X-ray units, and digital imaging products. Planmeca Oy, the parent company of the Finnish Planmeca Group, is strongly committed to R&D, and is the largest privately held company in the field.
