

Planmed Verity

*Extremity Scanner revolutionizes
3D extremity imaging.*

Perfect adaptability to your needs

Extremity imaging using MDCT (Multidetector Computed Tomography) can be challenging. Very often, patients have limited mobility and cannot be positioned easily on the examination table. Furthermore, an awkward posture is needed when imaging e.g. the elbow in order to avoid unnecessary X-ray exposure to sensitive organs. Planmed Verity® Extremity CBCT (Cone Beam Computed Tomography) Scanner provides a motorized gantry with adjustable height and tilt for the best possible extremity positioning.

Lower Extremity

Seated knee, leg, ankle, foot, toes

Planmed Verity® can always be positioned in a way that is the most convenient for the patient. Fracture healing follow-up is possible without removing the cast.

Weight-bearing imaging

Standing knee, ankle, foot, toes

3D image of a standing patient shows the anatomy in a natural position, and can reveal problems that are otherwise non-discernible, such as diminished joint space.

Upper Extremity

Seated or supine elbow, arm, wrist, hand, fingers

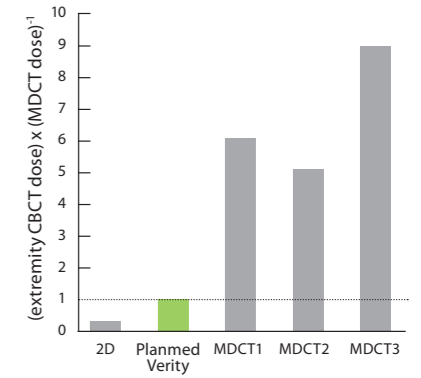

The versatile positioning also enables imaging directly on a hospital bed. Within the X-ray room, a single person can easily move the unit to the preferred position.

Clinical benefits – fast diagnosis with point-of-care imaging

Low radiation dose

CBCT technology provides up to 10 times lower radiation dose compared to conventional MDCT scanners. Scattered radiation is low; depending on local regulations 1 mm Pb equivalent shielding is recommended. Planmed Verity extremity scanner can also be equipped with an integrated radiation shield to protect the patient during the scan.

Multiple uses, high image quality

Planmed Verity extremity CBCT scanner offers superior image quality with a low dose. Isotropic resolution of up to 0.2 mm with efficient metal artefact reduction algorithm shows tiny bone structures with minimal interference. Also arthrography examinations with intra-articular contrast can provide improved visualization of joint disorders.

Connectivity

Self-contained system and DICOM 3.0 conformant. Worklist management with touch-screen interface. Complete volumes or user defined slice stacks can be generated and archived to PACS or burned on a DVD with a viewer.

reddot design award
winner 2012

Key Facts

- Dimensions (WxLxH): 76x184x160cm
- Either mobile or fixed configuration
- Joystick controlled gantry height and tilt
- TearDrop™ shaped bore
- Plugs into a standard electric outlet
- Integrated workstation with touch screen
- Soft, selectable upholstery colour
